

Surge Suppressors 100V OV, UV, OC and Reverse Supply Protection Controller with -3mV Reverse Threshold

Manufacturers	Analog Devices, Inc
Package/Case	MSOP-10
Product Type	Surge Suppressors
RoHS	
Lifecycle

General Description

The LTC4368 protects applications from power supply voltages that may be too high, too low, or even negative and from overcurrent faults in both forward and reverse directions. The LTC4368 controls the gate voltage of a pair of external N-channel MOSFETs to ensure that the load is connected to the input supply only when there are no voltage or current faults.

Two comparator inputs allow configuration of the overvoltage (OV) and undervoltage (UV) set points using an external resistive divider. A current sense resistor sets the forward and reverse circuit breaker current thresholds. After a forward current fault, the LTC4368 will either latch off power, or retry after a user adjustable delay. After a reverse current fault, the LTC4368 waits for the output to fall 100mV below the input to reconnect power to the load.

The LTC4368 has a 32ms turn-on delay that debounces live supply input connections and blocks 50Hz and 60Hz AC power. UV/OV faults also trigger the 32ms recovery delay before the external MOSFETs are turned back on.

Features

Wide Operating Voltage Range: 2.5V to 60V

Overvoltage Protection to 100V

Reverse Supply Protection to -40V

Bidirectional Electronic Circuit Breaker:

Adjustable $\pm 1.5\%$ Undervoltage and Overvoltage Thresholds

Low Operating Current: 80 μ A

Low Shutdown Current: 5 μ A

Controls Back-to-Back N-Channel MOSFETs

Blocks 50Hz and 60Hz AC Power

Hot Swappable Supply Input

Pin-Selectable Overcurrent Auto-Retry Timer or Latchoff

10-Pin MSOP and 3mm \times 3mm DFN Packages

AEC-Q100 Qualified for Automotive Applications

Application

Reverse Battery Protection

Portable Instrumentation

Automotive and Industrial Surge Protection

Energy Storage Systems
