

## AD7714YRZ

Data Sheet

CMOS, 3V/5V,  $500~\mu A$ , 24-Bit Sigma-Delta, Signal Conditioning ADC; Package: SOIC - Wide; No of Pins: 24; Temperature Range: Automotive

Manufacturers Analog Devices, Inc

Package/Case SOIC-24

Product Type Data Conversion ICs

RoHS Pb-free Halide free

Lifecycle

Please submit RFQ for AD7714YRZ or Final to us: sales@ovaga.com We will contact you in 12 hours.

**RFO** 

## **General Description**

The part features three differential analog inputs (which can also be configured as five pseudo-differential analog inputs) as well as a differential reference input. The AD7714 thus performs all signal conditioning and conversion for a system consisting of up to five channels. A new Y grade has recently been added to the existing range. Compared to the A grades this new grade has an extended operating temperature range, schmitt trigger inputs on SCLK and DIN, tighter linearity specifications, lower power consumption and is available in a smaller package.

The AD7714 is ideal for use in smart microcontroller- or DSP-based systems. It features a serial interface that can be configured for three-wire operation. Gain settings, signal polarity and channel selection can be configured in software using the serial port. The AD7714 provides self-calibration, system calibration and background calibration options and also allows the user to read and write the on-chip calibration registers.

CMOS construction ensures very low power dissipation, and the power-down mode reduces the standby power consumption to  $15 \mu W$  typical at 3 V. Minimum operating voltage for the A grades is 3 V and 2.7 V for the Y grades. The A grades are available in a 24-pin, 0.3 inch-wide, plastic dual-in-line package (DIP); a 24 lead small outline (SOIC) package and a 28-lead shrink small outline package (SSOP). The new Y grade is available in a 24-pin, 0.3 inch-wide, plastic dual-in-line package (DIP); a 24 lead small outline (SOIC) package and a 24-lead Thin Shrink Small Outline Package (TSSOP).

## **Features**

Charge Balancing ADC24 Bits No Missing Codes0.0015% Nonlinearity

Five-Channel Programmable Gain Front EndGains from 1 to 128Can Be Configured as Three Fully DifferentialInputs or Five Pseudo-DifferentialInputs

Three-Wire Serial InterfaceSPI®, QSPITM, MICROWIRETM and DSP Compatible

3 V (AD7714-3) or 5 V (AD7714-5) Operation

Low Current (350 µA typ) with Power-Down (5 µA typ)

Low Noise (<150 nV rms)

Low-Pass Filter with Programmable Filter Cutoffs

Please see data sheet for additional features
