

# AD7228ACRZ

Data Sheet

Digital to Analog Converters - DAC 8-BIT OCTAL CMOS IC

Manufacturers Analog Devices, Inc

Package/Case SOIC-24

Product Type Data Conversion ICs

## **General Description**

The AD7228A contains eight 8-bit voltage-mode digital-to-analog converters, with output buffer amplifiers and interface logic on a single monolithic chip. No external trims are required to achieve full specified performance for the part.

Separate on-chip latches are provided for each of the eight D/A converters. Data is transferred into the data latches through a common 8-bit TTL/CMOS (5 V) compatible input port. Address inputs A0, A1 and A2 determine which latch is loadedwhen WR goes low. The control logic is speed compatible withmost 8-bit microprocessors.

Specified performance is guaranteed for input reference voltages from +2 to +10 V when using dual supplies. The part is also specified for single supply +15 V operation using a reference of +10 V and single supply +5 V operation using a reference of +1.23 V. Each output buffer amplifier is capable of developing +10 V across a 2 k $\Omega$  load.

The AD7228A is fabricated on an all ion-implanted, high-speed, Linear Compatible CMOS (LC2MOS) process which has been specifically developed to integrate high-speed digital logic circuits and precision analog circuits on the same chip.

#### Product Highlights

Eight DACs and Amplifiers in Small Package The single-chip design of eight 8-bit DACs and amplifiers allows a dramatic reduction in board space requirements and offers increased reliability in systems using multiple converters. Its pinout is aimed at optimizing board layout with allanalog inputs and outputs at one side of the package and alldigital inputs at the other.

Single or Dual Supply OperationThe voltage-mode configuration of the DACs allows singlesupply operation of the AD7228A. The part can also be operated with dual supplies giving enhanced performance for some parameters.

#### Microprocessor Compatibility

The AD7228A has a common 8-bit data bus with individualDAC latches, providing a versatile control architecture for simple interface to microprocessors. All latch enable signals are level triggered and speed compatible with most high performance8-bit microprocessors.

### **Features**

Eight 8-Bit DACs with Output Amplifiers

Operates with Single +5 V, +12 V or +15 Vor Dual Supplies

μP Compatible (95 ns WR Pulse)

No User Trims Required

Skinny 24-Pin DIPs, SOIC, and 28-Terminal SurfaceMount Packages
