

PIC16C621A-04/P

Data Sheet

8 Bit MCU, One Time Programmable, PIC16 Family PIC16C6x Series Microcontrollers, 4 MHz, 1.75 KB

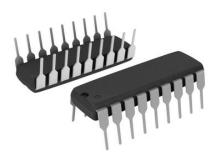

Manufacturers <u>Microchip Technology, Inc</u>

Package/Case PDIP-18

Product Type Embedded Processors & Controllers

RoHS Rohs

Lifecycle

Please submit RFQ for PIC16C621A-04/P or Email to us: sales@ovaga.com We will contact you in 12 hours.

RFO

General Description

The PIC16C62X devices are 18 and 20-Pin ROM/EPROM-based members of the versatile PICmicro family of low cost, high performance, CMOS, fully static, 8-bit microcontrollers.

All PICmicro microcontrollers employ an advanced RISC architecture. The PIC16C62X devices have enhanced core features, eight-level deep stack, and multiple internal and external interrupt sources.

The separate instruction and data buses of the Harvard architecture allow a 14-bit wide instruction word with the separate 8-bit wide data. The two-stage instruction pipeline allows all instructions to execute in a single cycle, except for program branches (which require two cycles). A total of 35 instructions (reduced instruction set) are available. Additionally, a large register set gives some of the architectural innovations used to achieve a very high performance.
