

Data Sheet

3-26V Dual Operational Amplifier, Ta = -40 to  $+105^{\circ}\text{C}$  - Pb-free; Package: 8 LEAD PDIP; No of Pins: 8; Container: Rail; Qty per Container: 50,Op Amps 3-26V Dual Lo PWR -40 to 105deg C

Manufacturers ON Semiconductor, LLC

Package/Case PDIP-8

Product Type Amplifier ICs

RoHS Green

Lifecycle

<u>RFQ</u>

# **General Description**

Utilizing the circuit designs perfected for quad op-amps, this dual op-amp features low power drain, a common mode input voltage range extending to ground/VEE, and single supply or split supply operation. The LM358 series is equivalent to one-half of an LM324. These amplifiers have several distinct advantages over standard operational amplifier types in single supply applications. They can operate at supply voltages as low as 3.0 V or as high as 32 V, with quiescent currents about one-fifth of those associated with the MC1741 (on a per amplifier basis). The common mode input range includes the negative supply, thereby eliminating the necessity for external biasing components in many applications. The output voltage range also includes the negative power supply voltage.

**Features** Application

Short Circuit Protected Outputs ONSEMI

True Differential Input Stage

Single Supply Operation: 3.0 V to 32 V

Low Input Bias Currents

Internally Compensated

Common Mode Range Extends to Negative Supply

Single and Split Supply Operation

ESD Clamps on the Inputs Increase Ruggedness of the Device without Affecting Operation

Pb-Free Packages are Available
